“60% of profile pictures on internet dating sites contain the GPS coordinates of where it was taken.”

– JAMES LYNE
HOW SAFE ARE YOU?

Some Cybersecurity threats to you are:

- Bots (only the naughty robots!)
- Malware (‘mal-’ means something is ‘bad!’)
- Hacked Accounts (breaking and entering!)
- Spam (yuck, you don’t want it!)
- Data gone AWOL (everyone knows your business now!)
- Unsecured Home Wireless Networks (everyone, and not just your BFF, is using you!)

HOW DO I AVOID RISK?

Change your Password regularly!

- Make sure the password is long and strong with a min. of 8 characters and a mix of upper and lowercase letters, numbers and symbols.
- Make the password unique to your life and not easy to guess.
- Don’t share your password with others.
- Have a different password for each online account.
- Write down your password and store it in a safe place away from your computer.
- Change your password several times a year.
- If possible, use multi-factor authentication (voice-activated, facial recognition, finger scanning, etc.).
