CYBER SECURITY

What Is Cybersecurity?

As our world becomes more dependent on technology, those who would want to harm us have figured out ways to abuse technology for their own benefit. Cybersecurity is a field in which techniques are implemented in order to prevent things such as unauthorized access to information, as well as to protect networks, programs and data from being attacked or damaged.

Why Should You Care?

If we did not have cybersecurity, you would be vulnerable to:

- Viruses
- Fraud
- Identity Theft
- Malware
- Extreme frustration
- Ransom Ware
- Unhappiness

How Can You Protect Yourself

- Research cybersecurity and ways to protect yourself
  - Be aware
- Change your password regularly and make sure they are strong
- Do not share any personal information
  - KEEP THINGS PRIVATE!
- Back up important information onto a flash drive
- Do not click on suspicious looking pop up advertisements.
